

STONE URBAN DISTRICT COUNCIL.

Annual Report of the Medical Officer of Health for the year ended 31st December, 1945.

To the Chairman & Members of the Stone Urban District Council.

Mr. Chairman & Gentlemen,

I beg to submit to you my report for the year 1945.

During the year there has been a continuation in the good health of the community that characterised the previous year, 1944. There were 16 cases of Diphtheria of which 6 had been immunised. In these six patients the disease was mild, and in three of them the condition was not clinical diphtheria but was diagnosed by positive swab. The low incidence of Diphtheria affords ample justification for immunisation, which is now almost entirely carried out in the Infant Welfare Clinic. The fall in the percentage of immunised children (between the ages of 5 and 15) in the figures of this report compared with those of 1944 is due to the increased estimated official figure given for the child population of that age.

There were no Scarlet Fever cases notified in the district but two Urban cases were referred to Yarnfield from the North Staffordshire Royal Infirmary. The incidence of Measles and Whooping Cough was very low, and there was no epidemic outbreak of Influenza.

The birth rate showed a fall compared with 1944, but it is still slightly higher than the rate for England and Wales. The death rate was slightly higher than the previous year.

Although no statistics can be given to support the view, it is evident that there was a high degree of physical perfection in the infant population of the district, and this was contributed to in no small measure by there being available for all infants a supply of milk and vitamins at low cost, and also by the facilities for education in the management of their children provided for those mothers who attended the Infant Welfare Clinic.

It has not been found possible to provide a Maternity Home in the district, but the domiciliary treatment of maternity cases has worked very well. Tribute can be given to the work of the District Nurses.

The water continued to be equal to the demands of the Town, and regular samples were taken, all of which were satisfactory. The age of the Steam Plant at No. 2. borehole is causing some concern as to the risk of breakdown.

The Sewage Works:- No further additions were carried out here during the year, and although the effluent continued to prove satisfactory increasing difficulties are being experienced with regard to the treatment of the sludge. A report is being obtained from a consultant as to the best method of treatment.

No new housing has been carried out during the past year by the Council and the need for houses is very great, considerable distress being caused by people living in overcrowded and insanitary conditions in the Town.

The early return of our Surveyor and Sanitary Inspector is anticipated. In his absence the Sanitary Inspector of the Rural District has continued to perform the necessary sanitary duties in the District.

I am indebted to Mr. Matthews and to the office staff, and to

Mr. Hawkes for their kind assistance and help to me during the year.

I have the honour to be

Your obedient servant,

CLIFFORD ARTHUR.

(Acting) Medical Officer of Health.

TUBERCULOSIS.

New cases and mortality during 1945.

	Male		Female		Total
